

4EVERFLEX®

THE BEST POND LINER FOR PROCESSOR,
USER AND POND INHABITANT

• STRONG AND FLEXIBLE • FISH-FRIENDLY • DURABLE • 15-YEAR WARRANTY •

The benefits

- 15-year guarantee, also on welded joints
- Elastic and flexible, easy to process
- Environment-, plant- and fish-friendly, no leaching substances such as plasticisers
- Resistant to UV light, frost and ozone
- Can be processed to size and welded with hot air welding gun, welding equipment and high-frequency welding machines
- Can be repaired with adhesive if necessary

A strong, elastic pond liner is the basis for every pond. When installing it, it is important that the liner is flexible to work with. A durable plant- and fish-friendly liner guarantees years of pond enjoyment!

The best combination of PVC and EPDM

4everflex® is a unique pond liner that combines the best properties of PVC pond liner and EPDM. Developed by NPI and available exclusively from NPI. With years of successful application, it is an established liner with proven quality.

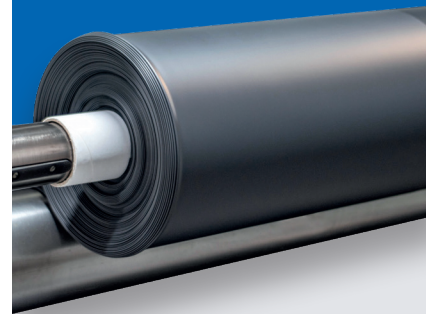

Strong and flexible

The great advantage of 4everflex® is that it is both strong and flexible. This makes it easy to process to size, in any pond shape. This is because 4everflex® can be welded at a wide range of temperatures, making welding extra easy. The welded joints are extremely strong, allowing the liner to effortlessly mould itself to the shape of the pond. For a sleek result!

15-year guarantee

Durability and environmental friendliness are the guiding principles at 4everflex®. This is why we provide a guarantee on the film for no less than 15 years. In contrast to other pond liners, 4everflex® also covers the welding and gluing joints manufactured by NPI.

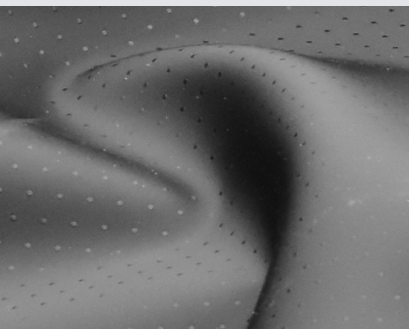

AVAILABLE IN
ROLLS OR
WELDED TO SIZE!

Fish-friendly

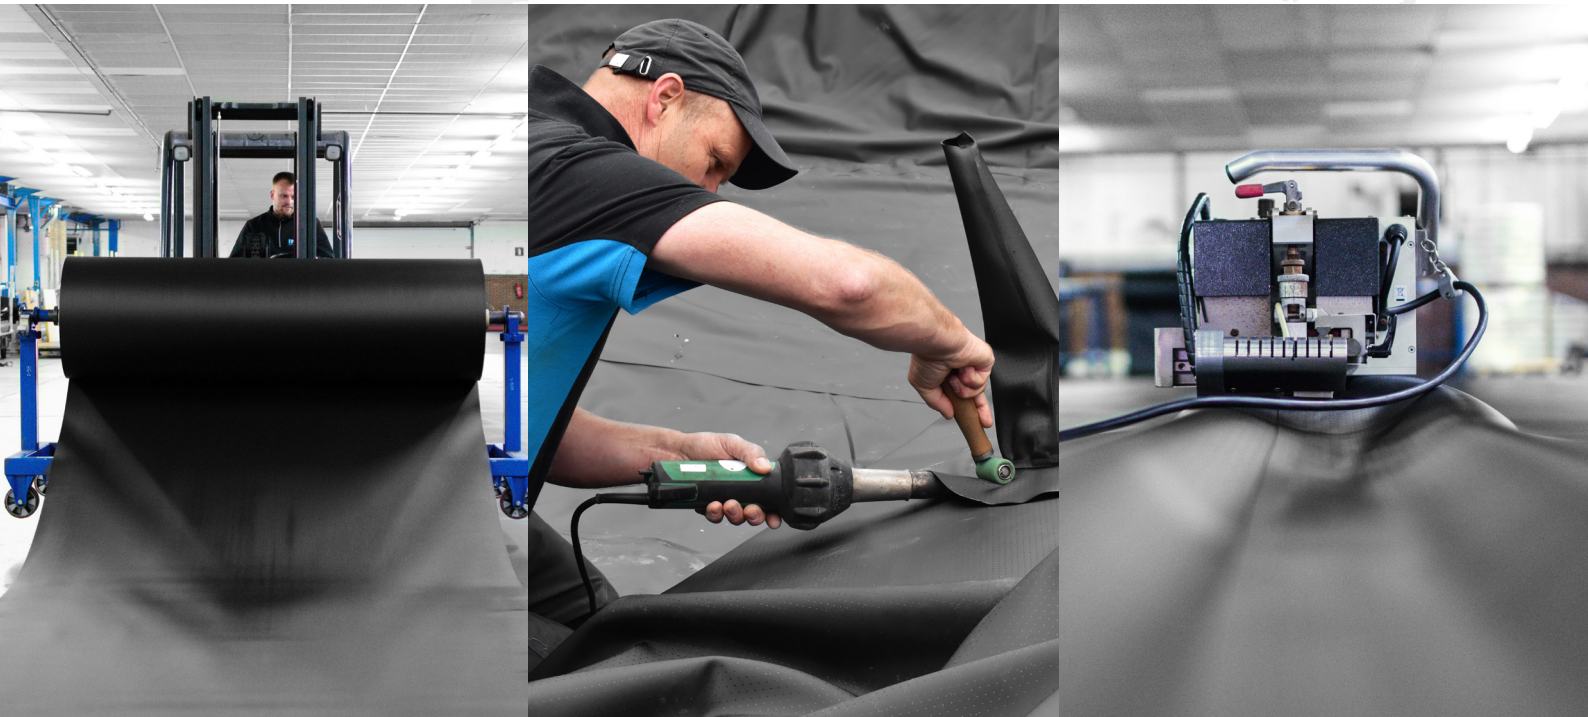

The well-being of the fish in the pond is paramount. For the highly sensitive olfactory system of the fish, an odourless liner is therefore a requirement. 4everflex® has no odour like other pond liners, and is therefore perfect for your (koi) fish.

NPI

Lining solutions

• SPECIALIST IN POND LINERS • FILM PROCESSORS FROM THE VERY BEGINNING •

Market leader in pond liners

NPI has become one of the leading producers in pond liners. Our many years of experience and technical expertise are the basis for this. In the 1950s we started welding hula hoops and soon NPI grew into the main welder of Draka-Techna films for the civil engineering sector.

Today, at our production site in Tzummarum, we yearly process millions of square meters of pond liner. Through our network, the films find their way to projects at home and abroad. Worldwide many water features have been lined with an NPI pond liner; swimming ponds, artificial lakes, basins, in (recreational) parks, ornamental ponds and fire ponds.

Our mission

Our team represents more than 65 years of experience and craftsmanship in welding and confectioning various films. With our knowledge and experience, we gladly contribute to the development of high quality pond liners, according to the following principles: convenience for the processor, long-term enjoyment for the user and optimal well-being of the pond inhabitant. Our knowledge becomes your advantage!
